

# Perspectives Wheel Template

Great minds don't think alike. It's good business to involve multiple perspectives when solving problems and making decisions. Having a 360-degree view increases creativity, collaboration, and ownership.

To create a perspectives **mind map**:

Step One: Write the problem to be solved in the center.

Step Two: Create a branch for each stakeholder.

Step Three: For each stakeholder branch, list details such as who you need to contact, what you want to learn, questions you want to ask, resources they can add, etc.
